

The **X2 Bomb** is a four-pole asymmetric geodesic tent with a fifth pole supporting an extended porch. Weighing less than 3.35 kg (complete), it is still lighter than most mountain tents with only a standard vestibule. All the fabrics and components are selected for strength – they are not the lightest available. This combination of design and specification yields a tent that is greater than the sum of its parts.

Weight	3.35 kg
Flysheet	72 g/m <sup>2</sup> , 50 denier, ripstop, high-tenacity nylon 6.6 7000 mm hydrostatic head silicone coating
Groundsheet	92 g/m <sup>2</sup> , 70 denier, taffeta nylon 7000 mm hydrostatic head PU coating
Inner Canopy	35 g/m <sup>2</sup> , 30 denier, ripstop, high-tenacity nylon 6.6
Poles	5 x 9.35 mm Ø DAC Featherlite
Guylines	6 x 3 way attachment 2.00 mm Dyneema with mini-Linelok adjusters
Pegs	16 x 7001-T6 square-section alloy pegs, (weight 12 g each)
Features	Extended porch vestibule with single door on front panel Internal storage pockets Two front vents in flysheet
Colours	Green Red (currently not available) Gold (currently not available)
Made in	China
Status	2nd-generation model launched 2006. This model is not discontinued, but is currently out of production. Possibly back in stock 2012.
